Dear Recruitment Team,

Are you searching for and willing to have on-board a self-motivated, goal-oriented individual with a strong desire to succeed and work with others to achieve success? Are you searching for an enthusiastic, proactive and dependable team member with strong interpersonal skills and a desire to work with people? Look no further.

I am a driven and focused individual who knows how to set goals and work intensely to achieve them. This is clearly exemplified by my time after university. When I was about to graduate from my degree program, I set my sights on improving my knowledge and experience to a great extent having realized I will graduate with a second class lower degree honors from one of the prestigious technological oriented university in the country, Federal University of Technology, Minna (FUTMinna), Niger state. This realization came after deep reflection on how I can stand above those that graduated with higher honors than mine. Since I also needed to earn the money to pay for my school finances and other miscellaneous which I cannot get from home, I knew I had set a demanding goal for myself. One of the school goal was to learn Computer repair & troubleshooting and networking. I persevered and learnt much whilst schooling and working and also ensuring a balance between the two. After my National Youth Service Corp scheme (NYSC) and work experience with TechMahindra, a business process outsourcing firm in august, I set a number of goals to learn as much as I could in the Information Communication and Technology (ICT) arena. This has led me to learn to a great extent the listed below

Programming language	Web Frameworks
JavaScript (node.js, jQuery)	**HTML and CSS**
Python	**Bootstrap**
PHP	**Ruby on the Rails**
Ruby	**Sinatra**
	Liquid
	WordPress

Everyday I dedicate my learning time to the lists, above and still work towards improving my knowledge in other ICT areas. **I can tell you that I can function in a junior or an entry-level role as support analyst, business analyst, web developer and designer, IT network support engineer, IT support technician.**

Aren't I the type of person you want working for you?

My degree is Computer Engineering. I have always had a flair to learn and use technology to improve the life of people and businesses inclusive.

It has become my desire to work with people in an IT business atmosphere and work in a company where I can set long-term goals for success.

I have enclosed my resume for your consideration. I would appreciate the opportunity to meet with you to discuss how I may add value and further the goals of your company. I look forward to your call.

Sincerely,

Oyetoro Stephen
